

IUSSI - North American Section

The William L. and Ruth D. Nutting Research Grant supports graduate student research into the field of basic termite biology. It offers funding of up to \$2500 to a student whose proposed research promises the best contribution to our understanding of these insects. Unfortunately, no award will be given this year, because the Awards Committee received no applications. Students working on termite biology are strongly urged to apply next year, and faculty are encouraged to make this grant known to anyone they think may be a suitable applicant.

IUSSI-NAS Awards Committee

Terry McGlynn and Stephen Pratt (Co-Chairs)

Rebecca Clark, Hongmei Li-Byarlay, Juliana Rangel, and Chris Smith
